

## VideoGram™

### Technology made for corrections

With VideoGram™, friends and families create 30-second video clips with their smartphones and send them to inmates for viewing on the JPay kiosk. Inmates can then create 30-second video replies. Optimized for mobile use, VideoGram™ allows friends and families to capture and share special, unplanned moments while agencies retain the utmost control.

### Features and Advantages

- Via smartphone, friends and family can record and send VideoGrams in one simple step without attaching them to an email; videos appear in their mobile interface as a "thread" or "stream" alongside clips received from their loved one
- New mobile iteration replaces email attachments with "chat threads" for increased usability and tracking
- Ability to set inbound and outbound permissions as well as video length, with most videos capped at 30 seconds
- For inmates, a VideoGram section on the JPay kiosk allows them to view video clips outside of the email program in a similar "thread" format, or via the JP4\*Tablet
- Inmates also have the ability to record and send outbound VideoGrams directly from the JPay kiosk
- Videos are screened, reviewed and released from the same facility portal used to manage email
- Fully supported by 24/7/365 bilingual customer care

### Secure Platform

With the ability to audit and archive every video clip, VideoGrams offer enhanced intelligence compared to legacy communications like phone calls and in-person visits. A smart filter streamlines the in-facility review process reducing agency workload while allowing for faster release of VideoGrams.

**See for yourself why VideoGram technology is poised for the highest adoption rates ever.**
